BIOELECTROCHEMISTRY AND BIOENERGETICS

Subject Index of Volume 35

ACh-receptor channel's
Evaluation of fractal properties of ACh-receptor channel's gating exposed to microwave fields (Abbate et al.) 81
ATP content
Effects of extremely high frequency electromagnetic fields on electrophoretic mobility and ATP content in rat erythrocytes (Kuzmanova et al.) 53

Baseline respiratory activity
Comparative metabolic interference by low-amplitude swept-frequency magnetic fields vs. baseline respiratory activity and time (Russell) 19
Bioeffects
Gap junction impedance, tissue dielectrics and thermal noise limits for electromagnetic field bioeffects (Pilla et al.) 63
Biological effect
Triaxial exposure system providing static and low-frequency magnetic fields for in vivo and in vitro biological studies (Raganella et al.) 121
Biological tissue
Numerical calculation and comparison of electromagnetic field parameters inside biological tissue (Valenčič et al.) 115
Blood
The influence of extremely low-frequency variable magnetic fields on rheologic and dielectric properties of blood and the water–electrolyte balance in experimental animals (Cieślar et al.) 29
Bone formation
The role of insulin-like growth factor II in magnetic field regulation of bone formation (Ryaby et al.) 87

Ca^{2+}–calmodulin
Weak magnetic field modulation of ion dynamics in a potential well: mechanistic and thermal noise considerations (Muehsam, Pilla) 71
Cell growth
Low level direct current — cell culture fibroblast model (Batista et al.) 99
Collision frequency
Interaction mechanism between electromagnetic fields and ion adsorption: endogenous forces and collision frequency (Chiabrera et al.) 33
Combined magnetic field
The role of insulin-like growth factor II in magnetic field regulation of bone formation (Ryaby et al.) 87
Cylindrical biological bodies
Electromagnetic inverse-scattering solutions for inhomogeneous cross-sections of cylindrical biological bodies by a modified Born approximation and a stochastic Markov random fields approach (Caorsi et al.) 109

Dielectric properties
The influence of extremely low-frequency variable magnetic fields on rheologic and dielectric properties of blood and the water–electrolyte balance in experimental animals (Cieślar et al.) 29
Direct current
Low level direct current — cell culture fibroblast model (Batista et al.) 99
Direct electric current
Tumour treatment by direct electric current: electrode material deposition (Miklavčič et al.) 93

Electrochemotherapy
Electrochemotherapy: variable anti-tumor effect on different tumor models (Serša et al.) 23
Electrode material deposition
Tumour treatment by direct electric current: electrode material deposition (Miklavčič et al.) 93
Electromagnetic energy deposition
Numerical approach based on the moment method for prediction of electromagnetic energy deposition in living tissues (Caorsi et al.) 103
Electromagnetic field
Experimental study of the effect of electromagnetic fields' in the early stage of wound healing (Detlavs et al.) 13
Electromagnetic field bioeffects
A perspective on electromagnetic field bioeffects and risk assessment (Easterly) 1
Electromagnetic field parameters
Numerical calculation and comparison of electromagnetic field parameters inside biological tissue (Valenčič et al.) 115
Electromagnetic fields
Interaction mechanism between electromagnetic fields and ion adsorption: endogenous forces and collision frequency (Chiabrera et al.) 33
Electromagnetic inverse-scattering solutions
Electromagnetic inverse-scattering solutions for inhomogeneous cross-sections of cylindrical biological bodies by a modified Born approximation and a stochastic Markov random fields approach (Caorsi et al.) 109
Electrophoretic mobility
Effects of extremely high frequency electromagnetic fields on electrophoretic mobility and ATP content in rat erythrocytes (Kuzmanova et al.) 53

ELF magnetic fields
Generation of extremely-low frequency magnetic fields with standard available commercial equipment: implications for experimental bioelectromagnetics work (De Seze et al.) 127
EMF
Gap junction impedance, tissue dielectrics and thermal noise limits for electromagnetic field bioeffects (Pilla et al.) 63
Endogenous forces
Interaction mechanism between electromagnetic fields and ion adsorption: endogenous forces and collision frequency (Chiabrera et al.) 33
Enzymes
Static magnetic field modulation of myosin phosphorylation: calcium dependence in two enzyme preparations (Markov, Pilla) 57
Erythrocyte membrane
Effect of static magnetic field on lectin binding to erythrocyte membrane (Traikov et al.) 49
Erythrocytes
Effects of extremely high frequency electromagnetic fields on electrophoretic mobility and ATP content in rat erythrocytes (Kuzmanova et al.) 53

Field gradient
Generation of extremely-low frequency magnetic fields with standard available commercial equipment: implications for experimental bioelectromagnetics work (De Seze et al.) 127
Fractal properties
Evaluation of fractal properties of ACh-receptor channel's gating exposed to microwave fields (Abbate et al.) 81

Gap junction impedance
Gap junction impedance, tissue dielectrics and thermal noise limits for electromagnetic field bioeffects (Pilla et al.) 63

Helmholtz coils
Generation of extremely-low frequency magnetic fields with standard available commercial equipment: implications for experimental bioelectromagnetics work (De Seze et al.) 127
High frequency electromagnetic fields
Effects of extremely high frequency electromagnetic fields on electrophoretic mobility and ATP content in rat erythrocytes (Kuzmanova et al.) 53

Inhomogeneous cross-sections
Electromagnetic inverse-scattering solutions for inhomogeneous cross-sections of cylindrical biological bodies by a modified Born approximation and a stochastic Markov random fields approach (Caorsi et al.) 109
Insulin-like growth factor
The role of insulin-like growth factor II in magnetic field regulation of bone formation (Ryaby et al.) 87
Interaction mechanism
Interaction mechanism between electromagnetic fields and ion adsorption: endogenous forces and collision frequency (Chiabrera et al.) 33
Ion adsorption
Interaction mechanism between electromagnetic fields and ion adsorption: endogenous forces and collision frequency (Chiabrera et al.) 33
Ion dynamics
Weak magnetic field modulation of ion dynamics in a potential well: mechanistic and thermal noise considerations (Muehsam, Pilla) 71

Issue dielectrics
Gap junction impedance, tissue dielectrics and thermal noise limits for electromagnetic field bioeffects (Pilla et al.) 63

Larmor precession
Weak magnetic field modulation of ion dynamics in a potential well: mechanistic and thermal noise considerations (Muehsam, Pilla) 71
Lectin binding
Effect of static magnetic field on lectin binding to erythrocyte membrane (Traikov et al.) 49
Living tissues
Numerical approach based on the moment method for prediction of electromagnetic energy deposition in living tissues (Caorsi et al.) 103
Low-amplitude magnetic field
Comparative metabolic interference by low-amplitude swept-frequency magnetic fields vs. baseline respiratory activity and time (Russell) 19

Magnetic fields
Triaxial exposure system providing static and low-frequency magnetic fields for in vivo and in vitro biological studies (Raganella et al.) 121
Metabolic interference
Comparative metabolic interference by low-amplitude swept-frequency magnetic fields vs. baseline respiratory activity and time (Russell) 19
Microwave fields
Evaluation of fractal properties of ACh-receptor channel's gating exposed to microwave fields (Abbate et al.) 81
Modified Born approximation
Electromagnetic inverse-scattering solutions for inhomogeneous cross-sections of cylindrical biological bodies by a modified Born approximation and a stochastic Markov random fields approach (Caorsi et al.) 109
Moment method
Numerical approach based on the moment method for prediction of electromagnetic energy deposition in living tissues (Caorsi et al.) 103
Myosin
Static magnetic field modulation of myosin phosphorylation: calcium dependence in two enzyme preparations (Markov, Pilla) 57

Nonlinear transmembrane ion transfer
Modelling of the effect of a weak electric field on a nonlinear transmembrane ion transfer system (Riznichenko et al.) 39

Phosphorylation
Static magnetic field modulation of myosin phosphorylation: calcium dependence in two enzyme preparations (Markov, Pilla) 57

Relative potency concepts
A perspective on electromagnetic field bioeffects and risk assessment (Easterly) 1
Rheologic properties
The influence of extremely low-frequency variable magnetic fields on rheologic and dielectric properties of blood and the water–electrolyte balance in experimental animals (Cieślar et al.) 29

Static magnetic field
Effect of static magnetic field on lectin binding to erythrocyte membrane (Traikov et al.) 49

Static magnetic fields
Static magnetic field modulation of myosin phosphorylation: calcium dependence in two enzyme preparations (Markov, Pilla) 57
Stochastic approach
Electromagnetic inverse-scattering solutions for inhomogeneous cross-sections of cylindrical biological bodies by a modified Born approximation and a stochastic Markov random fields approach (Caorsi et al.) 109

Triaxial exposure system
Triaxial exposure system providing static and low-frequency magnetic fields for in vivo and in vitro biological studies (Raganella et al.) 121
Tumor models
Electrochemotherapy: variable anti-tumor effect on different tumor models (Serša et al.) 23
Tumour treatment
Tumour treatment by direct electric current: electrode material deposition (Miklavčič et al.) 93

Variable magnetic fields
The influence of extremely low-frequency variable magnetic fields on rheologic and dielectric properties of blood and the water–electrolyte balance in experimental animals (Cieślar et al.) 29
V-79 cells
Low level direct current — cell culture fibroblast model (Batista et al.) 99

Water–electrolyte balance
The influence of extremely low-frequency variable magnetic fields on rheologic and dielectric properties of blood and the water–electrolyte balance in experimental animals (Cieślar et al.) 29
Weak electric field
Modelling of the effect of a weak electric field on a nonlinear transmembrane ion transfer system (Riznichenko et al.) 39
Wound healing
Experimental study of the effect of electromagnetic fields' in the early stage of wound healing (Detlavs et al.) 13
